Customer support

Gather support information: Before contacting Digi technical support for help, gather the following information:

- Product name and model
- Product serial number (s)
- Firmware version
- Operating system/browser (if applicable)
- Logs (from time of reported issue)
- Trace (if possible)
- Description of issue
- Steps to reproduce

Contact Digi technical support: Digi offers multiple technical support plans and service packages. Contact us at +1 952.912.3444 or visit us at www.digi.com/support.

Feedback

To provide feedback on this document, email your comments to

techcomm@digicom.com

Include the document title and part number (ConnectCore MP25 System-on-Module, 90002593 1P) in the subject line of your email.

About the ConnectCore MP25

The Digi ConnectCore® MP25 System-on-Module (SOM) platform is a highly integrated, cost-effective, connected, secure embedded solution, built on the STM32MP2 MPU family. It integrates memory, power management, pre-certified wireless connectivity and advanced Digi TrustFence device security with a complete, open-source Linux software platform based on the Yocto Project.

Features and functionality

The ConnectCore MP25 system-on-module is based on the STM32MP2 processor from STMicroelectronics. This processor offers a number of interfaces, most of them multiplexed and not available simultaneously. The module has the following features:

- STM32MP2 ARM Cortex-A35:
 - Cortex-A35 operating at up to 1.5 GHz.
 - 32 KB L1 instruction cache.
 - 32 KB L1 data cache.
 - 512 KB unified level 2 cache.
 - Arm® NEON™ and Arm® TrustZone®
- Up to 1 GB, 16-bit DDR4 memory.
- Up to 8 GB, 8-bit eMMC flash memory.
- STPMIC25A Power Management IC (PMIC):
 - x7 adjustable buck SMPS converter.
 - x6 adjustable general purpose LDOs.
 - x1 DDR3L/DDR4/lpDDR/general purpose LDO.
 - x1 USB PHY LDO.
 - x1 reference voltage VREFDDR for DDR memory LDO.
- IEEE 802.11 a/b/g/n/ac/ax WLAN interface.
- Bluetooth version 5.4.
- Debug interfaces:
 - Arm® CoreSight™ trace and debug: SWD and JTAG interfaces
- STM32MP2 interfaces:
 - x8 I2C.
 - x3 I3C.
 - x4 UART.
 - x5 USART.
 - x1 low-power UART
 - x8 SPI, three I2Ss full-duplex master/slave.
 - x4 SAI.

- x1 SPDIF Rx.
- x3 SDMMC.
- x1 USB 2.0 Host with embedded Hi-Speed PHY.
- x1 USB 2.0/3.0 dual-role data with both Hi-Speed and SuperSpeed PHYs.
- x1 USB Type-C Power Delivery control with two CC lines PHY.
- x1 PCI Express with embedded 5 Gbits/s PHY (shared with USB 3.0 SuperSpeed).
- x3 FDCAN.
- x2 Gigabit Ethernet.
- x1 Gigabit Ethernet Switch connected to ETH1.
- x1 Flexible memory control (FMC) interface.
- x2 Octo-SPI Flash memory interface.
- x2 camera interfaces for CMOS sensors, one with ISP.
- x1 MIPI CSI camera interface.
- x1 LCD-TFT display controller.
- x1 MIPI DSI display interface.
- x1 LVDS display interface.

Safety instructions

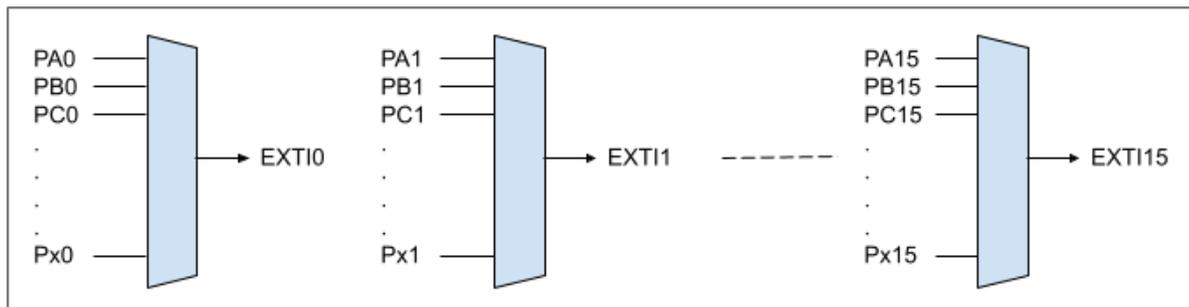

- The ConnectCore MP25 module cannot be guaranteed operation due to the radio link and so should not be used for interlocks in safety critical devices such as machines or automotive applications.
- The ConnectCore MP25 module has not been approved for use in (this list is not exhaustive):
 - nuclear applications
 - explosive or flammable atmospheres
- There are no user serviceable components inside the ConnectCore MP25 module. Do not modify the ConnectCore MP25 in any way. Modifications may exclude the module from any warranty and can cause the ConnectCore MP25 to operate outside of regulatory compliance for a given country, leading to the possible illegal operation of the radio.
- Use industry standard ESD protection when handling the ConnectCore MP25 module.
- Take care while handling to avoid electrical damage to the PCB and components.
- Do not expose ConnectCore MP25 module to water or moisture.
- Use this product with the antennas specified in the ConnectCore MP25 module user guides.

Limitations and notices

GPIO

The ConnectCore MP25 SoC has a limitation in the number of GPIOs that can be used as interrupt lines. The Extended Interrupt and Event Controllers (EXTI1 and EXTI2) can only handle up to 16 GPIO lines working as interrupt (EXTI0..EXTI15). The multiplexers work as shown in the following figure:

EXTI mux GPIO selection

This means that if pin 1 of two given ports (for instance, PB1 and PD1) have been selected to work as interrupt, pin 1 of any other GPIO port cannot simultaneously work as interrupt.

When designing your hardware, avoid using the same GPIO numbers as interrupt lines of three or more peripherals.

Latch-up

Latch-up is a condition that can cause excessive current draw and result in excessive heating of the microprocessor or its power supplies. This excessive heating can permanently damage the microprocessor and/or its supporting components.

The microprocessor used on this module, like all CMOS devices, can be driven into a latch-up condition if any I/O pin is driven outside of its associated power rail. Care must be taken to:

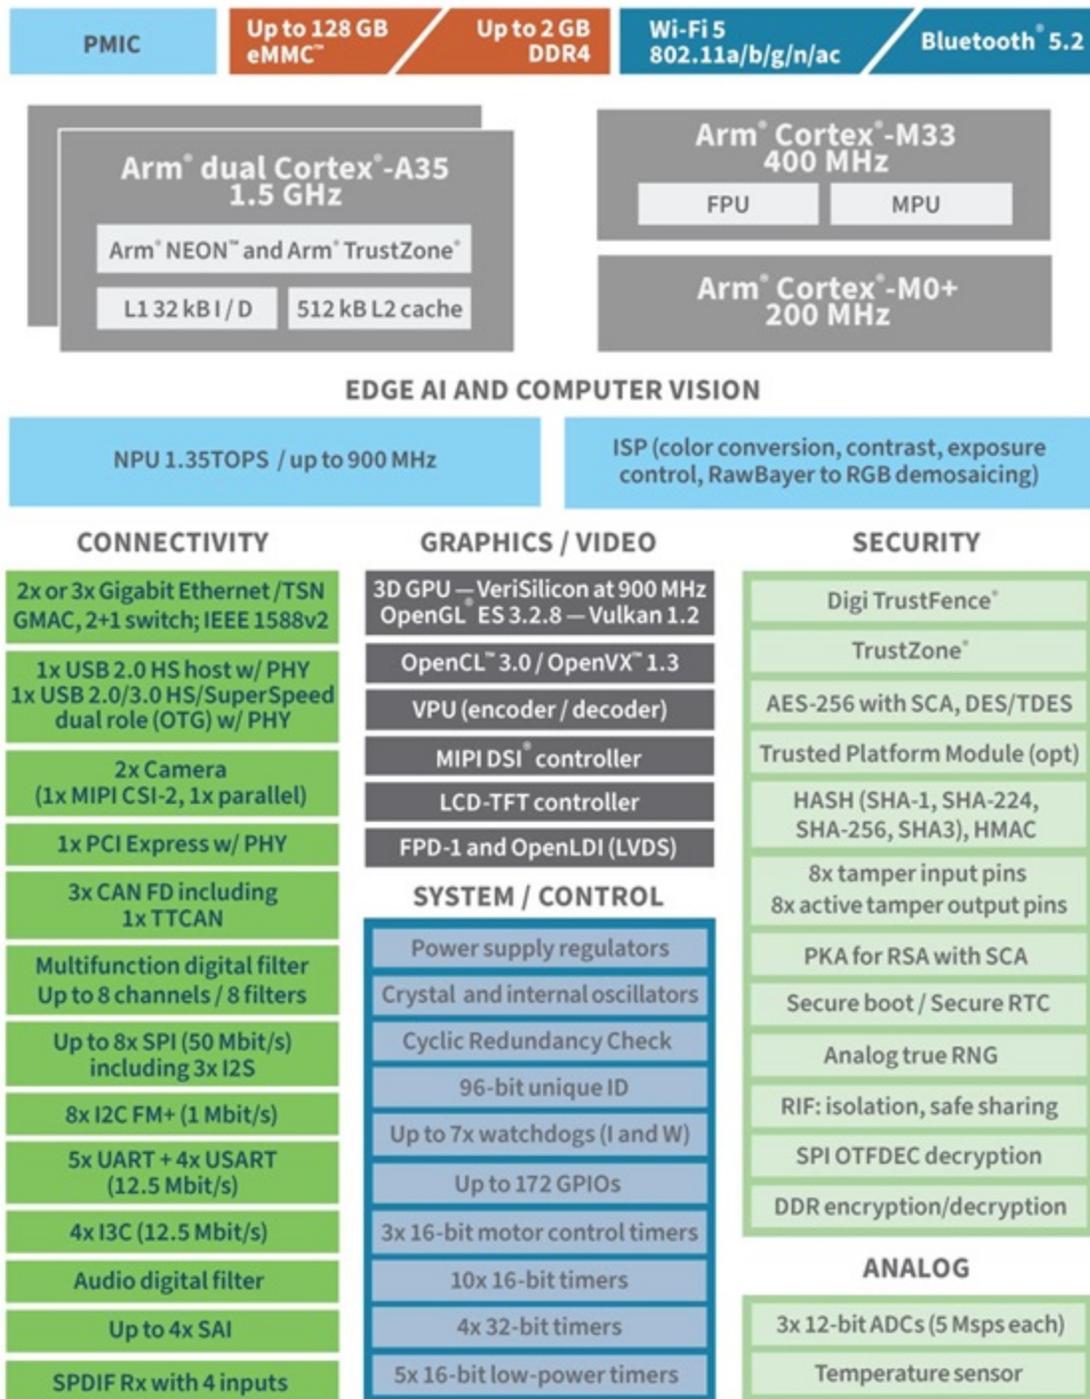

- Never drive an I/O pin beyond its positive rail or below ground.
- Never drive an I/O pin from an external power source during the power-on or reset sequences.
- Never hot-swap the module or interrupt its ground connection to external circuitry.

When you use an external supply on the carrier board supporting the ConnectCore MP25 module, make sure this supply is NOT back driving STM32MP2 I/Os while their power rails are not enabled. For example, this can happen when an external 3.3V supply is available on the carrier board and this supply powers components driven by STM32MP2 I/Os. In this case, Digi recommends you enable the external power supply after internal 3.3V is enabled, or add the necessary protection circuitry to avoid back voltage (leakage).

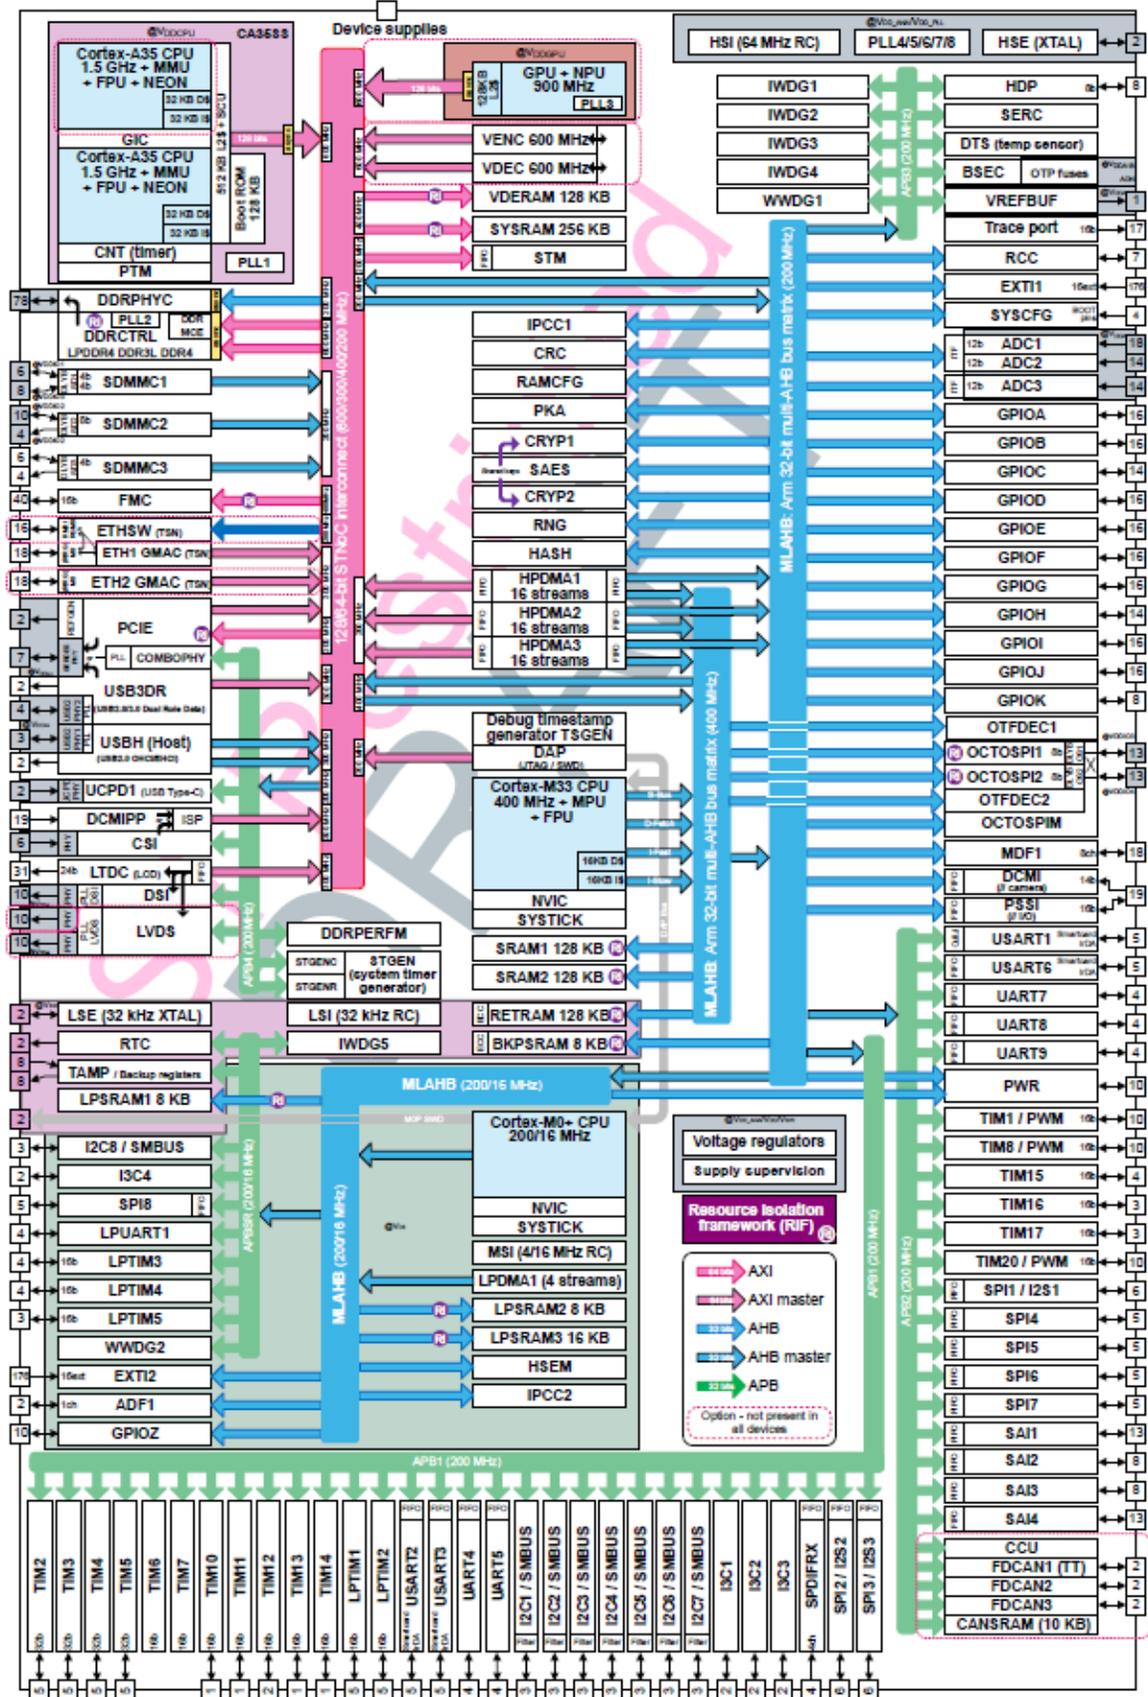

Block diagrams

The figures below show block diagrams of the ConnectCore MP25 module and of the STMicroelectronics STM32MP2 application processor.

ConnectCore MP25 module

STMicroelectronics STM32MP2 application processor

Power interfaces

System-on-module power architecture

The ConnectCore MP25 requires two primary power supply inputs: VSYS and VSYS2, which are the input power supplies to the on-module ST STPMIC25A power management IC (PMIC) that generates all required supply voltages for the module as well as the external interfaces.

The following table summarizes the PMIC regulators and switches on the ConnectCore MP25 SOM:

PMIC regulator	SOM power rail name	Input power supply	Internally used	Externally available
BUCK1	-	VSYS2	YES	NO
BUCK2	-	VSYS2	YES	NO
BUCK3	-	VSYS2	YES	NO
BUCK4	VDDIO	VSYS	YES	YES
BUCK5	1V8	VSYS2	YES	YES
BUCK6	-	VSYS2	YES	NO
BUCK7	3V3	VSYS	YES	YES
LDO1	-	VSYS	YES	NO
LDO2	-	VSYS	YES	NO
LDO3	-	-	YES	NO
LDO4	-	VSYS	YES	NO
LDO5	-	VSYS	YES	NO
LDO6	LDO6	VSYS	NO	YES
LDO7	LDO7	VSYS	NO	YES
LDO8	LDO8	VSYS	YES	YES

In addition to the input power supplies of the PMIC, there are two additional power domains of the SOM that can be set externally.

- VCC_LICELL (VBAT pad of the MCU), which powers the low power V_{SW} domain of the CPU that supplies:
 - RTC
 - TAMP
 - LSI
 - LSE
 - IWDG5
 - Backup registers

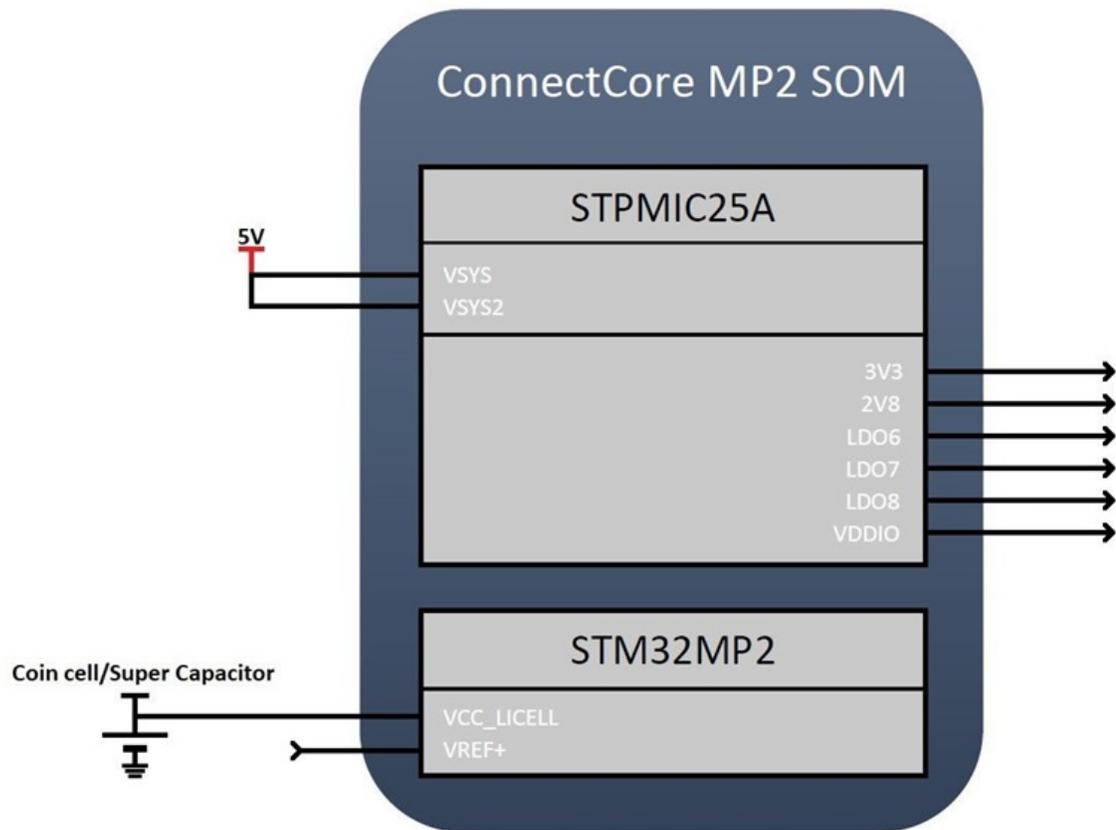

- LPSRAM1
- Retention RAM
- Backup SRAM

V_{SW} is supplied from VCC_LICELL only when there is no other supply on the system (low-power applications). Voltage on VCC_LICELL can be provided externally by a coin-cell/supercap. If low-power application is not required, then VBAT must be tied to VDDIO.

- VREF+, which is an external voltage reference for the ADC when the internal reference buffer is disabled. This supply can also be used as an output voltage reference for external components when using the internal voltage buffer.

Reference power diagram

The following diagram represents the power architecture of the ConnectCore MP25 module in a typical application:

Electrical characteristics

Input power rails

The following table lists the electrical specifications of all input power rails for the ConnectCore MP25:

Device	SOM power rail	Input voltage (V)		
		Minimum	Typical	Maximum
PMIC	VSYS	3.7	-	5.5
	VSYS2	2.8	-	5.5
CPU	VCC_LICELL	2.3	-	3.6
	VREF+	1.1	-	1.8

Output power rails

The following table lists the electrical specifications of all output power rails for the ConnectCore MP25:

SOM power rail	Used internally in the SOM	Output voltage			Accuracy (%)		Continuous output current (mA) ¹	Turn-on time (us)		Turn-off time (ms)
		Min	Typ	Max	Min	Max		Typ	Max	Max
3V3	YES	-	3.3	-	-4	4	2500	235	400	1.5
1V8	YES	-	1.8	-	-4	4	500	235	400	1.5
LDO6	NO	0.9	-	4.0	-2	2	400	160	-	1.5
LDO7	NO	0.9	-	4.0	-2	2	400	160	-	1.5
LDO8	YES	-	1.8	-	-2	2	150	160	-	1.5
VDDIO	YES	-	3.3	-	-4	4	500	235	400	1.5

Note Some of the electrical characteristics may depend on the configuration and operation mode of the different regulators. For a complete description of the electrical characteristics of the different output power rails (PMIC regulators), see the STM32MP2 datasheet.

¹ The maximum output current involves both external and internal circuitry. For those regulators that are used internally in the SOM, the current available outside will be lower.

Bootstrap

The ConnectCore MP25 system-on-module can be configured to boot from different devices and interfaces as determined by the boot ROM. The configuration of the booting process of the CPU is done through the BOOT pin and OTP bytes.

BOOT3	BOOT2	BOOT1	BOOT0	A35 master	M33 master
0	0	0	0	UART/USB	UART/USB
0	0	0	1	SD-Card	-
0	0	1	0	eMMC	-
0	0	1	1	Development	Development
0	1	0	0	S-NOR	-
0	1	1	1	-	SD-Card
1	0	0	0	-	eMMC
1	0	1	1	-	S-NOR
1	1	0	0	Development	Development
1	1	1	1	UART/USB	UART/USB

Note If the configured boot device is not valid, the system falls back to USB downloader.

CAUTION! Digi highly recommends you include a recover mechanism on every design using the ConnectCore MP25 module.

To boot from a UART port, it is mandatory to access one of the UARTs defined by ST for this purpose on the specific pads:

Signal	Pin			
	USART2	USART6	UART8	UART9
Rx	PA8	PF4	PF3	PB14
Tx	PA4	PF5	PG3	PD13

For further information, refer to STMicroelectronics documentation.

Wireless interfaces

The ConnectCore MP25 System-on-Module combines a wireless local area network (WLAN) and Bluetooth dual solution to support IEEE802.11 a/b/g/n/ac/ax WLAN standards and Bluetooth 5.4, enabling seamless integration of WLAN/Bluetooth and Low Energy technology. Digi also offers a non-wireless variant of the ConnectCore MP25 module.

The following sections include specifications for the wireless interfaces available on the ConnectCore MP25 module.

WLAN IEEE 802.11a/b/g/n/ac/ax

The following sections specify the performance of the WLAN IEEE 802.11a/b/g/n/ac/ax interface on the ConnectCore MP25 module.

Modulation and data rates

The following tables list modulation values for the ConnectCore MP25 module, which supports the following WLAN standards:

Mode	Modulation & coding	Rate
802.11b	DBPSK	1 Mbps
	DQPSK	2 Mbps
	CCK	5.5 Mbps
	CCK	11 Mbps

Mode	Modulation & coding	Rate
802.11g	BPSK-1/2	6 Mbps
	BPSK-3/4	9 Mbps
	QPSK-1/2	12 Mbps
	QPSK-3/4	18 Mbps
	16QAM-1/2	24 Mbps
	16QAM-3/4	36 Mbps
	64QAM-2/3	48 Mbps
	64QAM-3/4	54 Mbps
802.11n	BPSK-1/2	MCS0
	QPSK-1/2	MCS1
	QPSK-3/4	MCS2
	16QAM-1/2	MCS3
	16QAM-3/4	MCS4
	64QAM-2/3	MCS5
	64QAM-3/4	MCS6
	64QAM-5/6	MCS7

Mode	Modulation & coding	Rate
802.11ac	BPSK-1/2	MCS0
	QPSK-1/2	MCS1
	QPSK-3/4	MCS2
	16QAM-1/2	MCS3
	16QAM-3/4	MCS4
	64QAM-2/3	MCS5
	64QAM-3/4	MCS6
	64QAM-5/6	MCS7
	256QAM-3/4	MCS8
	256QAM-5/6	MCS9
802.11ax	BPSK-1/2	MCS0
	QPSK-1/2	MCS1
	QPSK-3/4	MCS2
	16QAM-1/2	MCS3
	16QAM-3/4	MCS4
	64QAM-2/3	MCS5
	64QAM-3/4	MCS6
	64QAM-5/6	MCS7
	256QAM-3/4	MCS8
	256QAM-5/6	MCS9
	1024QAM-3/4	MCS10
	1024QAM-5/6	MCS11

Data rate (Mbps) - Non Short Guard Interval (Non-SGI)

Data rate (Mbps)		802.11b		802.11ga		802.11n		802.11ac			802.11ax

Transmit power

The following table lists nominal transmit power values for the ConnectCore MP25 module based on Murata LBEE5HY2GY-SMP specification.

RF band (GHz)	Standard	Output power (dBm)
2.4	802.11b	18 (1 Mbps) - 18 (11 Mbps)
	802.11g	17 (6 Mbps) - 17 (54 Mbps)
	802.11n	16 (MCS0) - 16 (MCS7)
	802.11ax	12 (MCS0) - 12 (MCS11)
5	802.11a	16 (6Mbps) - 16 (54 Mbps)
	802.11n (HT20)	14 (MCS0) - 14 (MCS7)
	802.11ac (VHT20)	12 (MCS0) - 12 (MCS8)
	802.11ax (HE20)	9 (MCS0) - 9 (MCS11)

Note Output power values are subject to change.

Antenna ports

The ConnectCore MP25 module has one antenna port on the module via a dedicated U.FL connector. The antenna port supports WLAN and Bluetooth functionality.

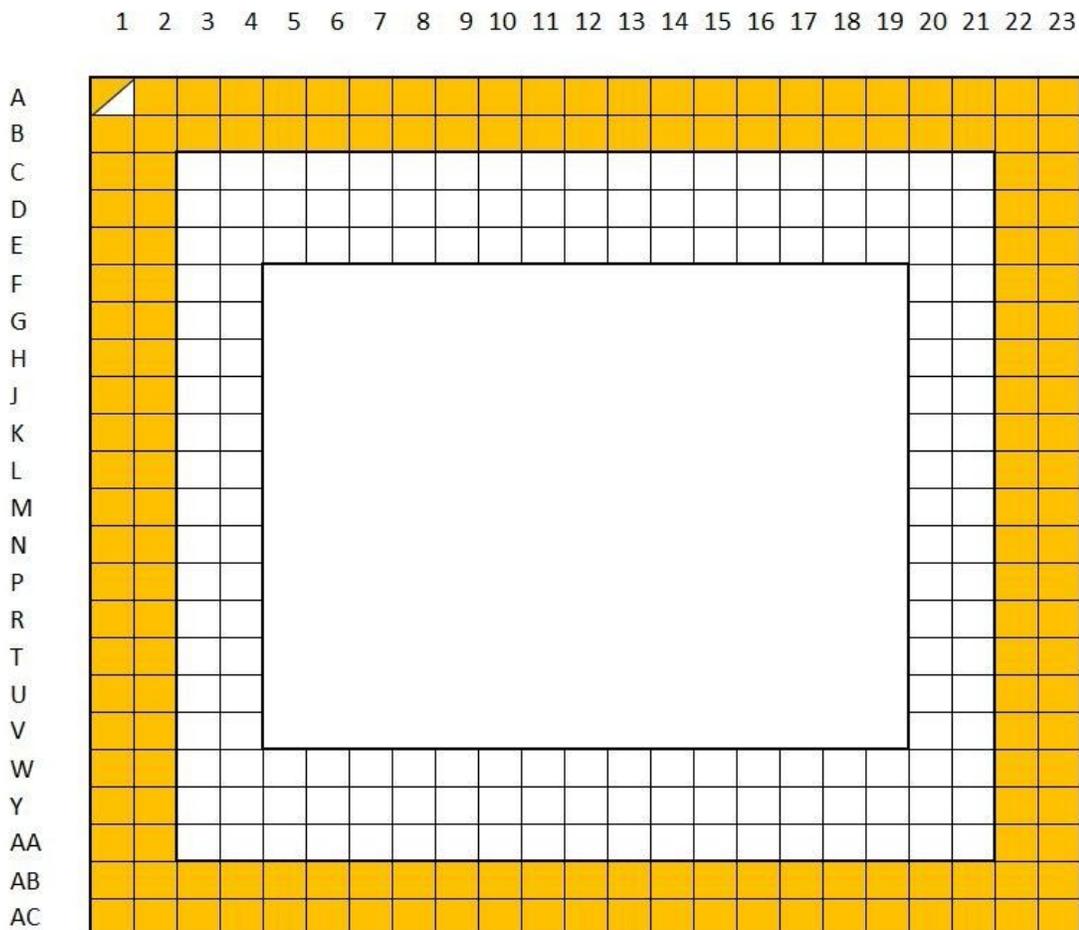

Bluetooth

The ConnectCore MP25 module supports both Bluetooth and Bluetooth Low Energy protocols:

- Bluetooth 5.4
- Integrated WLAN-Bluetooth coexistence

Module pinout

The ConnectCore MP25 module provides LGA 334 pins. The general layout can be found on the following diagram (view from top side):

Note Orange cells represent external ring pads, a group of pads that supports a subset of the SOM functionality. You can use these external pads to meet limited-functionality design requirements, simplifying the assembly process of the module.

External signals and pin multiplexing

The following tables provide the pinout information of the ConnectCore MP25 module. For additional information related to the signals listed in the table, refer to the STMicroelectronics STM32MP2 technical documentation.

Note See [Limitations and notices](#) for important information on designing your hardware.

Digi ConnectCore Smart IOMUX tool

The Digi ConnectCore Smart IOMUX tool can dramatically simplify pin configuration and resolution. You can enter the list of interfaces required by your project and use the Smart IOMUX graphical interface to mock up configuration options, resulting in full pin assignment and device tree snippets that match your desired functionality. See the [Smart IOMUX User Guide](#) for more information and download instructions.

Module specifications

The following sections describe the specifications for the ConnectCore MP25 SOM.

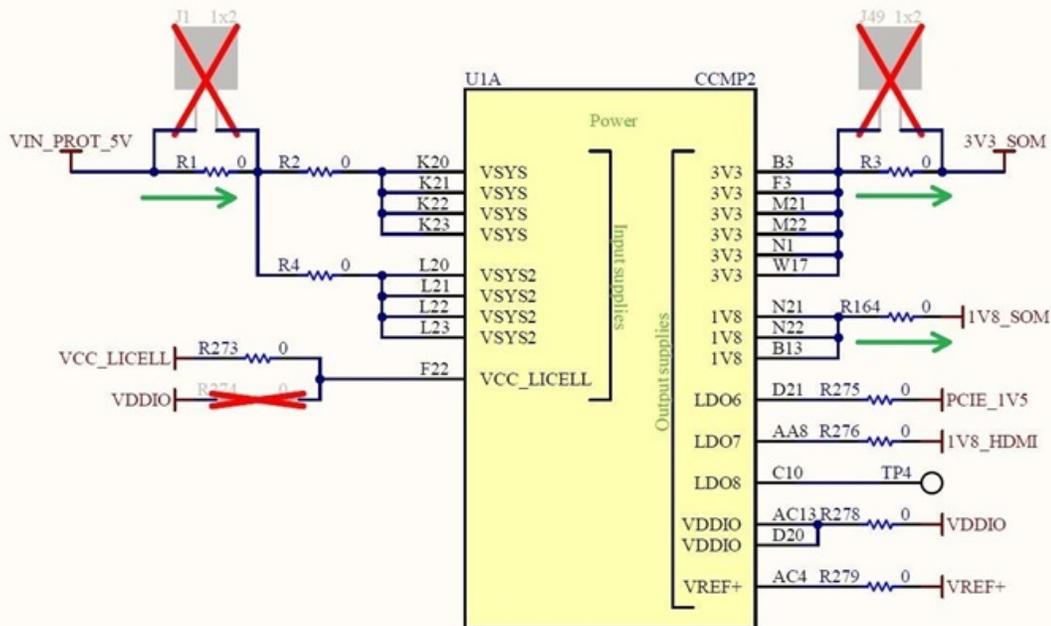

- Power consumption 75
- Mechanical specifications 76
- Environmental specifications 76
- Socket options 76

Power consumption

This section contains information about the power consumption of the ConnectCore MP25 system-on-module. All presented results, unless otherwise noted, were measured with ConnectCore MP25 variant -01 on a ConnectCore MP25 DVK at ambient temperature (25°C).

The power consumption in the ConnectCore MP25 DVK is calculated as follows:

$$\text{Module Power consumption (W)} = I_{R1} * 5V - I_{R3} * 3.3V - I_{R164} * 1.8V$$

Note These power consumption numbers should be considered guidelines only, never as fixed or absolute values. Actual values will depend entirely upon individual setup and system application.

Power consumption use cases

The power consumption of the ConnectCore MP25 system-on-module was evaluated in the following use cases:

Standby

In this mode, the system suspends to RAM and operation can be resumed without performing a new boot cycle. RAM memory is in self-refresh.

Note that in order to achieve the deepest standby power mode it is necessary to disable all wake-up sources except the internal RTC.

System IDLE

In this use case, the system is running Digi Embedded Yocto.

RTC

System on RTC (Real-time clock) mode keeping time of the system, powered from a coin cell with no other power supply attached.

Results

Use case	Power consumption	Notes
Standby	TBD	
IDLE	TBD	
RTC	TBD	

Mechanical specifications

This section provides mechanical dimensions and host PCB footprint guidance for the Digi SMTplus® form factor of the ConnectCore MP25 module.

Note See the ConnectCore MP25 product page for mechanical design documents, drawings, and other resources.

Host PCB footprint and cutout

Host PCBs must have a cutout to accommodate the components on the bottom side of the module:

- Cutout tolerances: +/- 0.15 mm
- Corner radius: 0.5 mm

Label

The MAC address and serial number of the SOM are encoded in the data matrix on the SOM label.

Environmental specifications

Operating temperature: -40 to 85 C.

CAUTION! Your final product may require additional thermal management such as passive (heatsink/spreader) or active (airflow) cooling to achieve the maximum operating temperature without exceeding the processor junction temp limit.

Socket options

For testing, prototyping, and other primarily development-related purposes, Digi International and E-tec Interconnect AG have developed sockets allowing the easy insertion and removal of modules in a carrier board design.

All drawings, user instructions, schematics and PCB footprints are posted on the ConnectCore MP25 technical support website.

Note The ConnectCore MP25 Development Board (Digi P/N CC-WMP255-KIT) has been designed to support a LPF334-129M-23ACEW55L socket, and can be used as a reference design.

All sockets are sold and built by [E-tec Interconnect AG](#). The table below provides an overview of the available part numbers.

Socket model	E-tec part number
ConnectCore MP25	LPF334-129M-23ACEW55L

Note Please direct all socket-related purchase inquiries to E-tec Interconnect AG (info@e-tec.com).
